CLARION AND CLIENT-SERVER FROM CONCEPT TO REALITY

Chris Behling
Vice-President of Technical Services

TopSpeed
Corporation

INTRODUCTION

- > Client/Server Terminology
- > *Clarion for Windows* implementation of client/server computing
- > Optimizing *Clarion for Windows* for client/server
- > Design issues of client/server applications

TopSpeed
Corporation

TERMINOLOGY

- > Table - File
- > Column - Field
- > Row - Record

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

CLIENT-SERVER COMPONENTS

- The Client
 - Front-End or User Interface
 - Built with PC Based Tools
- The Server
 - Back-End or SQL Server Engine
 - Organizes and Stores Data
 - Processes Concurrent Requests
 - Controls Data Access and Enforces Security

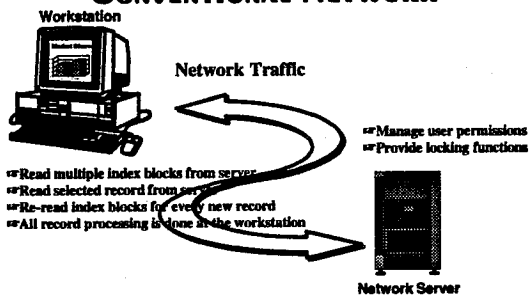

TopSpeed
Corporation

OPTIMAL DIVISION OF LABOR

TopSpeed
Corporation

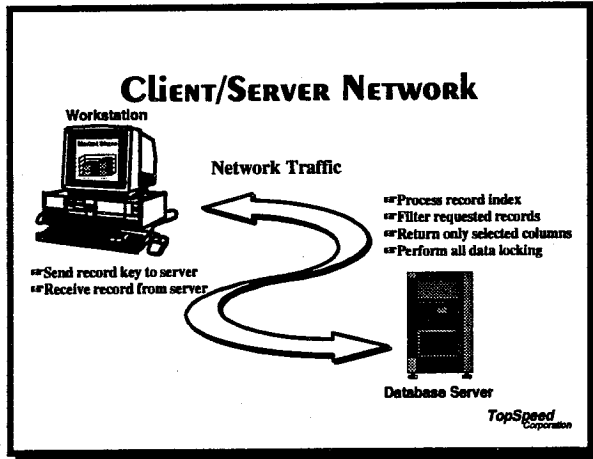

CONVENTIONAL NETWORK

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

ARCHITECTURAL OVERVIEW

- Data Dictionary
- Data Definition and Access Language Syntax
- Database Drivers
- ODBC Driver

TopSpeed
Corporation

ARCHITECTURE GOALS

- Data Transparency
- Language Abstraction

TopSpeed
Corporation

DATA DICTIONARY

- Definition of all files and fields
- Information used by application generator
- Can be generated from server based information

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

LANGUAGE SYNTAX

- Data access syntax is independent of Data Source
- VIEW syntax allows joins between different data sources

TopSpeed
Corporation

DATABASE DRIVERS

- Select data source in dictionary
- No other modifications are required

TopSpeed
Corporation

MORE TERMINOLOGY

- Join - Related Tables
- Project - Selected Fields
- Summary - Summarize Field
- Filter - Selection Criteria

TopSpeed
Corporation

Clarion and Client/Server

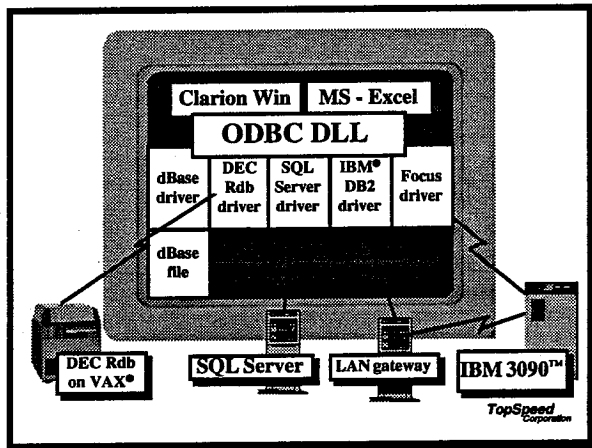

Chris Behling - Vice-President of Technical Services

WHAT ABOUT ODBC?

- Open Database Connectivity
- Microsoft database access standard
- Cross-Platform API (Windows & Mac)
- Widespread back-end driver support by database vendors

TopSpeed
Corporation

CW ODBC DRIVER

- Seamless access with a single API
- Back-end driver supplied by database vendor
- Network library required
- Varied levels of functionality

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

Optimizing Performance

- Avoid operations that cause substantial changes in record pointer, such as going to the last record
- All records in between the current and last record must be processed

TopSpeed
Corporation

Optimizing Performance (CONTINUED...)

- Avoid retrieving records in reverse when a reverse-key index does not exist.
- Pressing 'PageUp' in a browse procedure will cause this to happen
- Selecting the 'PREVIOUS' record in a form will cause this to happen

TopSpeed
Corporation

Optimizing Performance (CONTINUED...)

- Use clustered indexing on the server for your primary unique key.
- This will cause the data records to be stored in that key order, reducing sort, update, and search times

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

Optimizing Performance (CONTINUED...)

- If you retrieve a small number of columns, include all the columns you need to retrieve in the index after the key and the data records will never need be accessed (Sybase and MS-SQL Server)

TopSpeed
Corporation

Optimizing Performance (CONTINUED...)

- When to use pass-through SQL instead of Clarion syntax
- Determine what SQL Clarion driver is generating and use the following scenarios to best tune performance
- Determine whether Clarion program needs record

TopSpeed
Corporation

CLARION SQL Example (Bad)

```
SET (CUS:AcctKey)
LOOP UNTIL EOF (Customers)
  IF CUS:TotalDue > 10,000 THEN
    CUS>LastAction = '09/07/94'
    UPDATE (Customers)
  END
  NEXT (Customers)
END
```

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

Optimized SQL Example (Bad)

```
select * from Customers
update Customers
set LastAction = '09/01/94'
where CustId = '001'

update Customers
set LastAction = '09/01/94'
where CustId = '002'
```

TopSpeed
Corporation

Why This Is Bad

- Separate transaction for each update
- Two database connections must be active
- Index must be searched for each update
- Heavy network traffic
- Poor performance

TopSpeed
Corporation

Optimized SQL Example (BEST)

```
update Customers
set LastAction = '09/01/94'
where TotalDue > 10,000
```

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

Why This Is Good

- Entire update is under control of one transaction
- No searching of index for CustId to update individual records
- Much more efficient locking on server
- Only one database connection needed
- Minimal network traffic

TopSpeed
Corporation

CLARION VIEWS

- Clarion VIEW statement
 - Join multiple tables
 - Join different data sources
 - Add record selection criteria
 - Select specific fields

TopSpeed
Corporation

CLARION VIEWS

```
VIEW(Part)
  FILTER('PRT:OnHand = 0')
  PROJECT(PRT:Number, PRT:Name, PRT:OnHand)
  JOIN( Vendor, PRT:Vendor, VND:Number)
    PROJECT(VND:Name, VND:Address)
  END
END
```

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

SQL Views

- SQL view statement
 - Create a 'table' definition from multiple related tables
 - Summary fields can be included
 - Import definition into dictionary
 - Only one table in the view can be updated
 - Define frequently used views on the server

TopSpeed
Corporation

SERVER LOCKING

- Page locking
- Lock escalation
- Optimistic concurrency *don't lock*
- Browse mode

TopSpeed
Corporation

SQL ERROR HANDLING

- SQL errors passed through to application
- Invalid actions cannot be executed
- Transaction control maintains data-integrity

TopSpeed
Corporation

Clarion and Client/Server

Chris Behling - Vice-President of Technical Services

Availability

- > ODBC Driver - Now
- > AS/400 - Final Release
- > SQL Server - Version 1.1
- > Oracle - Version 1.1
- > Gupta - Version 1.1

TopSpeed
Corporation

WHERE TO GET MORE INFORMATION

- > Clarion for Windows training
- > Clarion Developer Newsletter
- > AS/400 white paper
